

PVC Reversible Bead Board

Reversible Nickle Gap and E&CB Board

Interlocking Pattern

The interlocking pattern allows for easy installation and concealed fasteners, resulting in a seamless appearance and a weatherproof surface.

Superior Paintability

With a special formulation for superior paint adhesion, our boards finish quickly and consistently.

Reversible Design

Our bead boards are made with edge and center bead on one face and nickel gap (shiplap) on the other, allowing one part to be used instead of multiple SKUs.

Built Strong

Weston's rigid PVC cap offers superior UV protection plus exceptional screw-holding and nailing properties, protecting against scratching, splitting or warping during and after installation.

Accessories

We have a range of accessory profiles that complete your project. Please see our website for brickmoulds, moldings, trim boards and outside corner solutions.

Endless Design Possibilities

Open up a spectrum of design possibilities by adding a colored, patterned, or textured vinyl wrap to our boards.

Flexible Packaging Options

Available in retail bundle sizes to make handling easier, increase inventory turnover and reduce required storage space.
