

# Comb Face Trim Boards

## Reversible Comb and Smooth Face Finger Joint

### Double-Sided Design

Weston's reversible comb face boards feature texture on one side and a smooth surface on the other. Use one product for two different aesthetic looks. Smooth edges ensure accurate butt-joints and simple installation.

### Versatile Applications & Seamless Integrations

Our boards enhance style and durability in any project, including new builds and remodels. They can be used independently or paired with other Weston millwork profiles in fingerjoint or PVC, offering endless design possibilities.

### Superior Pine Substrate

We use only the finest 100% clear pine, ensuring exceptional product consistency and dimensional stability. A premium substrate means a smooth, reliable finish every time.

### Premium Exterior-Grade Protection

Weston's comb face boards are engineered for durability. We use only exterior-grade adhesives and primer to ensure long-lasting performance, a superior finish, and reliability in even the most demanding conditions.

### Efficient Material Usage

Manufactured using finger-jointing techniques, these boards maximize the utilization of pine and reduce waste. Our broad selection of sizes minimizes cutting and trimming by contractors on-site.

### Enhanced Paint Adhesion

The comb face texture coated with our exterior-grade acrylic polymer primer provides an ideal surface for top-coat paint, allowing for stronger adhesion and a longer-lasting finish. Use Weston's boards to create the utmost project quality.
